

Acoustic Carpet Tile

Recommended Carpet Installation Guidelines

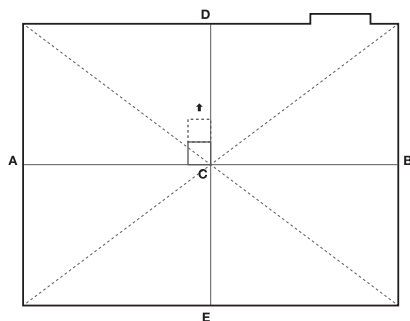

Feltech normally recommends that you use a professional fitter to install your carpet tiles, especially if you wish to create a special floor design. If you are comfortable with DIY then it is possible to install tiles yourself as all the instructions are included in your box of carpet tiles.

For detailed installation instructions that are compliant to the Feltech Modular Warranty, please refer to your Feltech Modular Installation Guide.

Carpet tiles can be laid over any smooth hard floor in good condition like parquet, laminate, stone. Remedy any issues with existing floor eg. loose or broken pieces, prior to laying tiles.

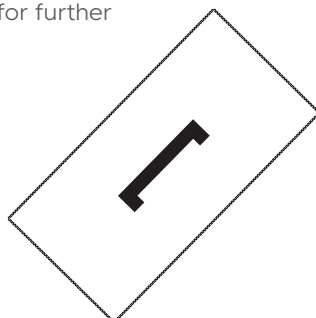

1. Locate room center by using a crossed diagonal grid. Install begins in center of room

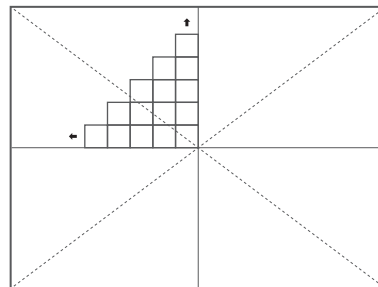

2. Using a V1 notched trowel 1.6mm x 1.6mm spread adhesive across slightly larger immediate surface to be covered.

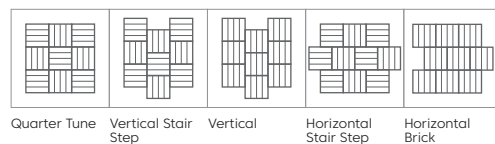

Note:- only recommended adhesives are to be used, please contact +66 2 240 2041 for further information.

3. Starting from center point, lay your tiles by hand using the pyramid method, using one of installation methods shown. Diagram of installation methods. Please note: side by side and linear patterns and colour match cannot be guaranteed.

Installation Method

Please note : side to side and / or linear pattern and colour match cannot be guaranteed.
